STU

PRODUCT:

What can go toe-to-toe with the sun's harshest rays without fading? Not vinyl. But thanks to a patented coating process, Ultrex - the pultruded fiberglass material in every Integrity® window and door performs like a champ. Even in bronze, it shows no visible fading after 2,000 hours of intense UVB exposure*. Lighter colors of vinyl can fade significantly after half that time.

At Integrity, we approach every aspect of our business - especially our impact on the environment - by asking how we can do things better. Then we do it.

Watch the test videos and take the Carl & Stu Challenge at
WWW.INTEGRITYWINDOWS.COM

*Comparison based on standard vinyl PVC material. Exposure to UV rays can be harmful. Integrity does not recommend the use of tanning beds.
